

# Kill Team — Targeting Quick Reference

## PART 1 — CAN I SHOOT? (Run through in order, stop at first NO)

### STEP 1 — CHECK YOURSELF

Do I have ENGAGE order?  
YES → continue    NO → CANNOT SHOOT  
(Exception: weapon has SILENT keyword → can shoot anyway)

### STEP 2 — CHECK MY POSITION

Am I within 1" of ANY enemy operative? (control range)  
NO → continue    YES → CANNOT SHOOT

### STEP 3 — CHECK TARGET VISIBILITY

Can I draw an unobstructed 1mm-wide line from MY HEAD to any part of  
TARGET'S MINIATURE (not base)?  
YES → continue    NO → CANNOT SHOOT (not visible)

### STEP 4 — CHECK IF TARGET IS A VALID TARGET

See the TARGET STATUS TABLE below.  
Valid → continue    Not Valid → CANNOT SHOOT

### STEP 5 — CHECK FOR FRIENDLIES

Are any FRIENDLY operatives within 1" of the TARGET? (their  
control range)  
NO → ☐ YOU CAN SHOOT    YES → CANNOT SHOOT

## PART 2 — TARGET STATUS TABLE (Step 4 above)

| Target's Order | Target in Cover? | Valid Target?                                      | Defender Gets Cover Save?                           |
|----------------|------------------|----------------------------------------------------|-----------------------------------------------------|
| ENGAGE         | Not in cover     | <input type="checkbox"/> Valid                     | <input type="checkbox"/> No save                    |
| ENGAGE         | In cover         | <input type="checkbox"/> Valid                     | <input type="checkbox"/> Yes — free normal save die |
| CONCEAL        | Not in cover     | <input type="checkbox"/> Valid                     | <input type="checkbox"/> No save                    |
| CONCEAL        | In cover         | <input type="checkbox"/> NOT VALID — cannot target | —                                                   |

When is a target "in cover"? There is intervening terrain (Light, Heavy, or Wall — not Exposed) within the target's control range (within 1" of them), AND the target is NOT within 2" of you (the shooter). Exposed terrain (ladders, grates, terrain feet) never counts as cover.

**PART 3 — SHOT MODIFIER TABLE (after confirming valid target)**

These don't block the shot — they change how your dice work:

| Situation                                                             | Effect on Dice                                                    |
|-----------------------------------------------------------------------|-------------------------------------------------------------------|
| Target in cover, Engage order (Light or Heavy terrain)                | Defender keeps +1 free normal success before rolling              |
| Target obscured — Heavy terrain between you, >1" from both operatives | Attacker discards 1 success; all crits become normals             |
| Target in cover AND obscured                                          | Both apply — lose a success AND defender gets free save           |
| Target behind Light terrain only                                      | Cover save only — no obscured penalty                             |
| Target behind Exposed terrain only                                    | Nothing — no cover, no obscured                                   |
| Target behind Wall terrain                                            | Cover save + obscured (but usually LoS is blocked entirely first) |
| Shooting through a window (valid LoS)                                 | Normal cover/obscured still apply based on other terrain          |
| Shooting through a window in a fortified position                     | Piercing is ignored by defender                                   |
| Seek weapon                                                           | No cover save for target                                          |
| Saturate weapon                                                       | No cover save for target                                          |
| Piercing x weapon                                                     | Target rolls x fewer defence dice                                 |
| Brutal weapon                                                         | Target can only block with critical successes                     |

**PART 4 — CAN I FIGHT (MELEE)? (much simpler)**

STEP 1 – CHECK RANGE

Is the enemy within 1" of me (horizontal distance only)?  
NO → CANNOT FIGHT    YES → continue

STEP 2 – CHECK VISIBILITY

Can I draw an unobstructed 1mm-wide line from MY HEAD to any part of TARGET'S MINIATURE?  
YES → ☐ YOU CAN FIGHT    NO → CANNOT FIGHT

No order restriction for Fight — you can fight on either Engage or Conceal. No cover or friendly restriction for Fight — cover only affects shooting. No "valid target" check — Conceal order doesn't protect against melee.

**PART 5 — TERRAIN TYPE MATRIX**

This is the core of most confusion. Each terrain type has different effects on Line of Sight, Cover, and Obscured.

## Terrain Type Effects

| Terrain Type    | Blocks Line of Sight?                   | Gives Cover?                   | Causes Obscured?                                | Notes                                                                                       |
|-----------------|-----------------------------------------|--------------------------------|-------------------------------------------------|---------------------------------------------------------------------------------------------|
| Light           | <input type="checkbox"/> No             | <input type="checkbox"/> Yes   | <input type="checkbox"/> No                     | Most crates, barrels, low walls                                                             |
| Heavy           | <input type="checkbox"/> No*            | <input type="checkbox"/> Yes   | <input type="checkbox"/> Yes (if >1" from both) | Large ruins, thick walls, big containers                                                    |
| Exposed         | <input type="checkbox"/> No             | <input type="checkbox"/> Never | <input type="checkbox"/> No                     | Ladders, grates, feet of terrain — never counts as intervening                              |
| Wall            | <input type="checkbox"/> Yes — fully    | <input type="checkbox"/> Yes   | <input type="checkbox"/> Yes                    | Solid walls; LoS and movement blocked completely                                            |
| Insignificant   | <input type="checkbox"/> No             | <input type="checkbox"/> No    | <input type="checkbox"/> No                     | Ignored for movement height; operatives move over freely                                    |
| Accessible      | <input type="checkbox"/> No             | <input type="checkbox"/> Yes   | Depends on type                                 | Can move through but costs extra 1"; only base centre needs to pass through                 |
| Blocking (gaps) | <input type="checkbox"/> Yes (gap only) | <input type="checkbox"/> Yes   | <input type="checkbox"/> Yes                    | Gaps/undersides that LoS cannot pass through                                                |
| Vantage         | <input type="checkbox"/> No             | <input type="checkbox"/> Yes   | Depends                                         | Upper levels — shooter gains Accurate 1 or 2 against lower Engage targets                   |
| Ceiling         | <input type="checkbox"/> No             | <input type="checkbox"/> Yes   | Depends                                         | Small-based operatives (≤50mm round, 60×35mm oval) can move underneath regardless of height |

\*Heavy terrain does NOT block line of sight on its own — it causes Obscured instead. LoS can still be drawn through it; the target just gets the obscured penalty.

## How Cover Works With Terrain Types

Cover requires intervening terrain within target's 1" that is not Exposed and target is not within 2" of shooter.

| What's between you and the target | Cover?                                                      | Obscured?                                                        |
|-----------------------------------|-------------------------------------------------------------|------------------------------------------------------------------|
| Light terrain within target's 1"  | <input type="checkbox"/> Cover save                         | <input type="checkbox"/> Not obscured                            |
| Heavy terrain within target's 1"  | <input type="checkbox"/> Cover save                         | <input type="checkbox"/> Also obscured (if >1" from both of you) |
| Exposed terrain only              | <input type="checkbox"/> No cover                           | <input type="checkbox"/> No obscured                             |
| Wall terrain                      | <input type="checkbox"/> Cover save (if within target's 1") | <input type="checkbox"/> Obscured                                |
| No terrain at all                 | <input type="checkbox"/> No cover                           | <input type="checkbox"/> No obscured                             |

## PART 5b — WINDOWS & DOORS

### Windows

Default rule: LoS cannot be drawn through a window unless you or the target is within 1" horizontally of it.

| Your distance from window | Target's distance from window | Can you draw LoS through it?              |
|---------------------------|-------------------------------|-------------------------------------------|
| Within 1"                 | Anywhere                      | <input type="checkbox"/> Yes              |
| Anywhere                  | Within 1"                     | <input type="checkbox"/> Yes              |
| More than 1"              | More than 1"                  | <input type="checkbox"/> No — LoS blocked |

Additional window rules:

- ▶ Weapon special rule Piercing is ignored when shooting through a fortified window (bunkers/stockades).
- ▶ If LoS is valid through a window, normal cover/obscured rules still apply based on terrain between you and the target.

### Doors & Hatches

| Door State | Terrain Type                         | Blocks LoS?                  | Blocks Movement?             | Cover/Obscured?                  |
|------------|--------------------------------------|------------------------------|------------------------------|----------------------------------|
| Closed     | Heavy + Wall                         | <input type="checkbox"/> Yes | <input type="checkbox"/> Yes | <input type="checkbox"/> Both    |
| Open       | Accessible + Insignificant + Exposed | <input type="checkbox"/> No  | <input type="checkbox"/> No  | <input type="checkbox"/> Neither |

How to open a door/hatch:

- ▶ Operate Hatch (1AP): Open or close a hatchway. Cannot do this if an enemy is within your control range, or if the hatchway/access point is in an enemy's control range.
- ▶ Breach (2AP, or 1AP with Piercing 2+ weapon / breaching charge / breach marker): Permanently opens a breach point. Nearby operatives may take damage (roll D6: on 4+ take damage equal to half result, and APL -1).

Fighting through a closed door:

- ▶ Use the Door Fight action — select an enemy on the other side of the door within 2" while your operative is touching the door.
- ▶ Normal fight rules apply otherwise.

## PART 5c — HEIGHT INTERACTIONS

Kill Team measures horizontal distance only — height doesn't count toward range.

| Situation                                      | Rule                                                                                                                                        |
|------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Two operatives on different floor levels       | Horizontal distance still only 1" for control range, but visibility may be blocked by the floor/ceiling terrain between them                |
| Shooting down from a high floor to a low floor | Check line of sight — if the floor is solid terrain blocking the line, no LoS → cannot shoot                                                |
| Shooting up to an operative on a ledge         | Same — need unobstructed LoS from your head to any part of their miniature                                                                  |
| Enemy is on a vantage point (terrain >2" high) | They can jump down up to 4" horizontally; you can shoot them normally if LoS exists                                                         |
| Cover when on different levels                 | Cover still applies — if there's intervening terrain within the target's control range (even a railing or ledge edge), they may be in cover |
| Obscured when on different levels              | Heavy terrain must be between you and the target along the targeting line — height changes the angle of that line                           |

## PART 5d — VANTAGE TERRAIN SHOOTING RULES

Vantage terrain is the upper level of a killzone — a surface above the killzone floor that operatives can be placed upon.

Being on Vantage terrain grants Accurate bonuses when shooting Engage-order targets below you:

| Height Difference          | Bonus                                                                       |
|----------------------------|-----------------------------------------------------------------------------|
| Target is 2" or more lower | Accurate 1 — retain 1 attack die as a free normal success (no roll needed)  |
| Target is 4" or more lower | Accurate 2 — retain 2 attack dice as free normal successes (no roll needed) |

Cover interaction with Vantage:

| Situation                                                    | Cover Rule                                                                                                |
|--------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| You're on Vantage, target has Conceal order and is 2"+ lower | Target cannot use Light terrain for cover (still retains any improved Save stat)                          |
| You're on Vantage, target has Engage order                   | Normal cover rules apply                                                                                  |
| Obscured with Vantage terrain                                | Ignore Heavy terrain connected to the Vantage terrain that both you and your target occupy simultaneously |

Vantage is powerful but limited: The Accurate bonus only applies against Engage-order targets. Conceal targets on the ground lose their Light terrain cover but retain Engage-order cover against your shots — they just can't use Light terrain specifically.

## PART 5e — KILLZONE-SPECIFIC TARGETING RULES

Different killzones add special targeting restrictions. Check which applies to your game:

### Close Quarters (Gallowdark Killzone)

Weapons with Blast, Torrent, or distance-based Devastating also gain Lethal 5+ in this killzone. This means 5s AND 6s count as critical successes on attack dice — not just 6s.

| Weapon Keyword | Extra Rule in Gallowdark |
|----------------|--------------------------|
| Blast x        | Also gains Lethal 5+     |
| Torrent x      | Also gains Lethal 5+     |
| Devastating x" | Also gains Lethal 5+     |

Fortified Positions (Compound Siege Killzone)

| Situation                                  | Targeting Rule                                                                     |
|--------------------------------------------|------------------------------------------------------------------------------------|
| Shooting through a fortified window        | Defender ignores Piercing weapon rule entirely                                     |
| Blast/Torrent with fortified position      | Secondary targets must be on the same side as the primary target                   |
| Devastating weapon with fortified position | Bonus damage only applies to operatives on the same side as the primary target     |
| Fighting across a fortified window         | Defender resolves dice first (reversed from normal)                                |
| Drawing LoS over a bunker/stockade         | Requires shooter to be 2" higher in elevation than the fortification Heavy terrain |

Bheta-Decima Hazardous Areas

| Situation                                                                          | Targeting Rule                                                                 |
|------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| Two operatives on the floor, 4"+ of Hazardous Area between them                    | Not a valid target — cannot shoot                                              |
| Operative on Vantage, targeting floor operative with gantry footprint between them | Not a valid target — cannot shoot (unless shooter or target is on that gantry) |

PART 6 — FULL SHOOT/FIGHT DECISION AT A GLANCE

Want to SHOOT?

☐ I have ENGAGE order?

☐ I'm **NOT** within 1" of any enemy?

☐ Target is VISIBLE to me?

☐ Target is valid?

- ENGAGE → always valid if visible
- CONCEAL + **NOT** in cover → valid
- CONCEAL + IN COVER → ☐ STOP

☐ No friendly within 1" of target?

→ GO — check modifiers table above

Want to FIGHT?

☐ Enemy within 1" (horizontal)?

☐ Enemy is visible to me?

→ GO — order/cover don't matter

PART 7 — CONTROL RANGE REFERENCE

Control range = within 1" AND visible (mutual — applies to both operatives).

| Used For                  | How                                                                                           |
|---------------------------|-----------------------------------------------------------------------------------------------|
| Fighting                  | Must be in enemy control range to Fight                                                       |
| Shooting restriction      | Cannot shoot if you are in any enemy's control range                                          |
| Friendly fire restriction | Cannot shoot at a target if a friendly is in the target's control range                       |
| Cover                     | Target needs intervening terrain within their own control range                               |
| Objective markers         | Contesting/controlling requires being within control range of the marker                      |
| Assisted fighting         | Friendlys in the enemy's control range (not in another enemy's CR) help improve your Hit stat |

## CHEAT CARD (print or screenshot this)

| SHOOT CHECKLIST                                                                                                                                                                                                                                                                                                                                                                                                                               | FIGHT CHECKLIST                                                                                                                       |
